Key Partners

GenAI & Cloud Technology Partners

LLM & Vision API suppliers are needed for image-to-text recognition and metadata creation. Cloud technology partners are needed to store and search users' data (images or videos) on a cloud server.

Community Influencers & KOCs

Social media creators and micro-influencers in journaling, travel, and collecting for promotion and engagement. For example, on Instagram, it could partner with aesthetic-focused creators and self-care creators on TikTok.

Related industry associations (official or non-official)

Associations can provide more professional knowledge and, when appropriate, carry out cooperation to promote offline activities, even second-hand transactions, or auction events

App Store & Platform Ecosystem Partners

Look for App Store feature opportunities by aligning the launches with Apple's seasonal themes, such as “App of the Day”. Build relationships with App Store optimisation consultants to maximise visibility in the overseas market as targeted.

Key Activities

AI Model Integration & Prompt Engineering

This is the technical activity behind the function. This includes building and refining AI-assisted metadata, tagging, and recommendation functions. It also enables the application to structure different types of collections into searchable memory archives.

Collection Sharing Community Plan

Encourage users to create and share their own collection content. It supports private saving, and can also be published to friends and private groups for chatting. In the future, it can even be directly sent to social media for dissemination. Furthermore, the relevant collectors we collaborate with can also offer prizes to individuals for their unique collections. The publicly released content will be selected by the platform for promotion.Form a complete growth loop of "creation → sharing → dissemination → growth".

Key Resources

- AI models, APIs, image-processing tools, and metadata frameworks

This relates to the development, maintenance, and updates on the core functions of the application.

- Product design, UI assets, and collection templates

This relates to the visual branding of the application. Since it's specifically aiming for people with a journeying habit, the visual appeal is a crucial element.

- Brand, user trust, and early collector community relationships

As a memory collection application, the brand should position it as a curator of life's moments and a way to discover the beauty in everyone's life, providing emotional and psychological value to the users.

-B-side partners

When the platform gains certain influence, it can generate profits through various channels such as advertising, e-commerce, and offline events. Therefore, it is necessary to identify business opportunities for enterprises (provided that they align with the platform's development strategy)

Value Propositions

Collection Journey App delivers an AI-powered, aesthetic, and structured way for collectors to record, organize, and relive their personal collections.

It helps **solve these customer problems:** collections are currently scattered across phone albums, notes, social media, or physical journals; users want to remember not only the item itself, but also the date, place, venue, and story behind it; existing tools are either too generic, not visually pleasing, or not designed for collectors; recording collections manually can be time-consuming and inconvenient.

Customer needs satisfied: convenience in recording collections; emotional connection and memory preservation; aesthetic self-expression; better organization and accessibility; a more enjoyable and personalized collecting experience.

We **deliver value by offering:** a dedicated digital journal for collectible items such as minerals,

vinyl records, tickets, and travel memorabilia; AI-assisted metadata suggestions, such as item title, category, and tags; an aesthetic visual archive that combines function with emotional memory preservation; easy search, filter, and organization by category, date, city, and tags; a personalized collection experience that transforms

Customer Relationships

Collection Journey builds relationships that are **personalized, supportive, and community-driven**, reflecting the emotional value of collecting.

-**Hobby collectors** expect a dedicated and knowledgeable relationship. We provide AI-assisted personalization (smart suggestions) combined with self-service support (FAQs, in-app guidance) to reduce manual effort.
-**Aesthetic journal users** seek creative empowerment. We offer an automated yet customizable experience—AI suggests, users edit—fostering co-creation.
- **Travel/memory collectors** value reliable archiving. We deliver consistent, secure storage with intuitive retrieval.
- **Young digital users** want fast, seamless interactions. We focus on automated self-service and community engagement (e.g., sharing collections).

These relationships are integrated via AI features and aesthetic UX, with costs centred on API usage, content development, and community management.

Channels

We reach customers through **digital-first, visually driven channels** that align with collector lifestyles.
- **Hobby collectors** discover niche tools via specialized communities (forums, Reddit), Instagram, and word of mouth.
- **Aesthetic journal users** engage on Pinterest, TikTok, and Instagram, responding to visual storytelling and influencer content.
- **Travel/memory collectors** are reached through travel blogs, YouTube, and app store features.
- **Young digital users** discover apps via TikTok, Instagram Reels, app store searches, and student communities.

MVP channels:

- **App stores** (primary distribution) with optimized listings.
- **Social media** (Instagram, TikTok, Pinterest) showcasing demos, before/after organization, and collector spotlights.
- **Community engagement** in collector groups (mineral shows, vinyl forums) for early feedback.
- **Referral and word of mouth** to drive organic growth.
All channels lead to a simple landing page or direct app store link. Social media and community outreach are low-cost, high-authenticity options that integrate naturally into users' routines—capturing a new collectible becomes a quick, rewarding habit.

Customer Segments

It mainly targets **individual consumers who enjoy collecting, documenting, and curating personal items and memories**.

Primary customer segments

-**Hobby collectors:** People who collect specific items such as minerals, crystals, vinyl records, postcards, stamps, tickets, or small memorabilia.
- **Aesthetic journal and scrapbook users:** Users who enjoy documenting life in a visually pleasing and organized way, but want a more structured and collection-focused tool than ordinary notes or photo apps.
-**Travel and memory collectors:** People who like to keep records of trips through tickets, museum passes, maps, postcards, or souvenirs, and want to attach stories, dates, and places to these items.
-**Young digital lifestyle users:** Mobile-first users, especially students and young professionals, who value self-expression, personalization, and visually appealing digital products.

Early adopter segment

For the MVP stage, the suitable early adopters are collectors of: **mineral/crystal, travel memorabilia, vinyl record lovers and concert ticket**

These groups have clear collecting behavior, emotional attachment to objects, and a real need for a more organized and aesthetic way to archive their collections.

Collection Journey App focuses specifically on users who want to collect, remember, and curate, not just store information.

Cost Structure

Database storage costs: Storing large amounts of images and metadata uploaded by users.

AI and recognition API call costs: Computational or interface fees for implementing AI tag suggestions, future image recognition, and matching.

Customer Acquisition Cost: Early-stage marketing expenses for commercial promotions with KOLs/KOCs (planner bloggers, mineral bloggers) on Xiaohongshu/Instagram or for ad placements in the App Store.

Labor Cost: Employee to develop and maintain the app

Payment Processing Fees: Different payment methods provider fees

Marketing & Advertising Expenses: Costs paid to Google for ad placement clients

Revenue Streams

Freemium model: Basic features are free to lower the barrier to customer acquisition.

Premium customization: Selling advanced themes and display templates (premium themes/templates).

Storage expansion: Offering additional cloud storage space for heavy collectors (extra storage).

Premium feature subscription: Charging for advanced AI features (AI features).

Physical merchandise: Providing paid services to export as physical scrapbooks or printable photo books (export to scrapbook/printable journal).

Advertising space fees: Charge suppliers for advertising space in the application

Monetization Revenue: The advertising fee provided by the company (advertiser/ad network)
